Acid-Base Physiology - PedsCCM

Acid-base homeostasis is the homeostatic regulation of the pH of the body's extracellular fluid (ECF). The proper balance between the acids and bases (i.e. the pH) in the ECF is crucial for the normal physiology of the body, and cellular metabolism. The pH of the intracellular fluid and the extracellular fluid need to be maintained at a constant level.. Many extracellular proteins such as ...

A conjugate acid, within the Brønsted-Lowry acid-base theory, is a species formed by the reception of a proton (H⁺) by a base—in other words, it is a base with a hydrogen ion added to it. On the other hand, a conjugate base is what is left over after an acid has donated a proton during a chemical reaction. Hence, a conjugate base is a species formed by the removal of a proton from an acid.

During residency, Sarah Faubel, and I wrote this programmed text on electrolytes. The process galvanized my interest in nephrology. The Acid Base and Electrolyte Companion is a highly styled book with a picture on every page along with simple questions at the bottom of each page to make sure you understand concepts before mindlessly flipping the page.

Abstract. Maintenance intravenous fluids (IVFs) are used to provide critical supportive care for children who are acutely ill. IVFs are required if sufficient fluids cannot be provided by using enteral administration for reasons such as gastrointestinal illness, respiratory compromise, neurologic impairment, a perioperative state, or being moribund from an acute or chronic illness.
