In electronics, emitter-coupled logic (ECL) is a high-speed integrated circuit bipolar transistor logic family.ECL uses an overdriven BJT differential amplifier with single-ended input and limited emitter current to avoid the saturated (fully on) region of operation and its slow turn-off behavior. As the current is steered between two legs of an emitter-coupled pair, ECL is sometimes called ...

The binary-reflected Gray code list for n bits can be generated recursively from the list for n   1 bits by reflecting the list (i.e. listing the entries in reverse order), prefixing the entries in the original list with a binary 0, prefixing the entries in the reflected list with a binary 1, and then concatenating the original list with the reversed list.
