In mathematics, non-Euclidean geometry consists of two geometries based on axioms closely related to those specifying Euclidean geometry. As Euclidean geometry lies at the intersection of metric geometry and affine geometry, non-Euclidean geometry arises when either the metric requirement is relaxed, or the parallel postulate is replaced with an alternative one.

Resize the image using data-dependent triangulation. See Image Geometry for complete details about the geometry argument. The -adaptive-resize option defaults to data-dependent triangulation. Use the -filter to choose a different resampling algorithm. Offsets, if present in the geometry string, are ignored, and the -gravity option has no effect.

Because noncognitive qualities like grit, curiosity, self-control, optimism, and conscientiousness are often described, with some accuracy, as skills, educators eager to develop these qualities in their students quite naturally tend to treat them like the skills that we already know how to teach: reading, calculating, analyzing,

and so on. And as the value of noncognitive skills has become ...

By default, the image format is determined by its magic number, i.e., the first few bytes of the file. To specify a particular image format, precede the filename with an image format name and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The magic number takes precedence over the filename suffix and the prefix takes precedence over the magic number and ...
