Copper is an essential trace element that is vital to the health of all living things (humans, plants, animals, and microorganisms). In humans, copper is essential to the proper functioning of organs and metabolic processes. The human body has complex homeostatic mechanisms which attempt to ensure a constant supply of available copper, while eliminating excess copper whenever this occurs.

The history of the global dispersal of dogs continues to be contentious (). In North America, the earliest confirmed dog remains (from Koster, IL) have been radiocarbon dated to ~9900 calibrated years before the present (2, 3), ~4500 years after the earliest unambiguous evidence of humans arriving in the Americas (). Although these early dogs were most likely not domesticated in situ (), the ...
