Etymology "Redox" is a portmanteau of the words "reduction" and "oxidation". The word oxidation originally implied reaction with oxygen to form an oxide, since dioxygen (O_2 (g)) was historically the first recognized oxidizing agent. Later, the term was expanded to encompass oxygen-like substances that accomplished parallel chemical reactions.

Oxidation-Reduction Potential (ORP) for Water Disinfection

An oxide / ˈɒksaɪd / is a chemical compound that contains at least one oxygen atom and one other element in its chemical formula. "Oxide" itself is the dianion of oxygen, an O^{2-} atom. Metal oxides thus typically contain an anion of oxygen in the oxidation state of -2 . Most of the Earth's crust consists of solid oxides, the result of elements being oxidized by the oxygen in air or ...

Balancing Redox Equations for Reactions in Acidic Conditions Using the Half-reaction Method. Redox reactions are commonly run in acidic solution, in which case the reaction equations often include $\text{H}_2\text{O}(\text{l})$ and $\text{H}^+(\text{aq})$. This page will show you how to write balanced equations for such reactions even when you do not know whether the $\text{H}_2\text{O}(\text{l})$ and $\text{H}^+(\text{aq})$ are reactants or products.
