EIA's International Energy Outlook 2017 (IEO2017) presents an assessment of long-term world energy markets. The IEO2017 is the first edition of this report to include model results through 2050, which are available on the IEO page of the EIA website. The graphics in this presentation focus on projections through 2040.

## **2017 International Energy Outlook**

World Energy Outlook 2004 appears at an extremely volatile and uncertain moment in modern energy history. Soaring oil, gas and coal prices, exploding energy demand in China, war in Iraq and electricity blackouts across the world are among the signs and causes of the profound transformations through which the energy world is passing.

## **World Energy Outlook 2006 - BIEE**

EIA's Annual Energy Outlook provides modeled projections of domestic energy markets through 2050, and it includes cases with different assumptions regarding macroeconomic growth, world oil prices, technological progress, and energy policies. Strong domestic production coupled with relatively flat energy demand allow the United States to become a net energy exporter over the projection period in most cases.

## **EIA - Annual Energy Outlook 2018**

By fuel, natural gas accounted for the largest increment in energy consumption, followed by renewables and then oil. Energy consumption rose by 3.1% in China. China was the largest growth market for energy for the 17th consecutive year.

Highlights World energy consumption is projected to increase by 59 percent from 1999 to 2020. Much of the growth in worldwide energy use is expected in the developing world in the IEO2001 reference case forecast. In the reference case projections for the International Energy Outlook 2001 (IEO2001), world energy consumption-
