

## **wound management principles and pdf**

INTRODUCTION. A wound is a disruption of the normal structure and function of the skin and skin architecture []. An acute wound has normal wound physiology, and healing is anticipated to progress through the normal stages of wound healing, whereas a chronic wound is defined as one that is physiologically impaired []. To ensure proper healing, the wound bed needs to be well vascularized, free of ...

Optimal management of post-operative wounds in the community is important to prevent potential complications such as surgical-site infections and wound dehiscence from developing. As such, general practitioners, who play an important part in the sub-acute management of post-operative wounds, should appreciate the physiology of wound healing and the principles of post-operative wound care. | RACGP

A gunshot wound (GSW), also known as ballistic trauma, is a form of physical trauma sustained from the discharge of arms or munitions. The most common forms of ballistic trauma stem from firearms used in armed conflicts, civilian sporting, recreational pursuits and criminal activity. Damage is dependent on the firearm, bullet, velocity, entry point, and trajectory.
