Lambda calculus (also written as  $\lambda$ -calculus) is a formal system in mathematical logic for expressing computation based on function abstraction and application using variable binding and substitution. It is a universal model of computation that can be used to simulate any Turing machine. It was first introduced by mathematician Alonzo Church in the 1930s as part of his research of the ...

### **Lambda calculus - Wikipedia**

In theoretical computer science, the  $\pi$ -calculus (or pi-calculus) is a process calculus. The  $\pi$ -calculus allows channel names to be communicated along the channels themselves, and in this way it is able to describe concurrent computations whose network configuration may change during the computation.. The  $\pi$ -calculus is simple, it has very few terms and so is a very small language (see #Syntax ...
